2017 YEAR IN REVIEW
Dear Friend,

The dawn of the next agricultural revolution is here.

As you read this report, I hope you are proud of and energized by the terrific progress that we achieved together in 2017, all of which was made possible by the generous support of friends like you. Thank you for sharing our commitment to creating a healthy, humane, and sustainable food supply.

Your partnership and financial support fueled GFI’s growth as we worked to transform the industrialized meat, egg, and dairy industries by fostering innovation, providing technical and strategic support to good food startups, and forging powerful domestic and international partnerships. All these initiatives are laser-focused on advancing the shift away from the products of conventional animal agriculture and toward foods that are better for the sustainability of our global food system, human health, our environment, and animals.

We welcomed more than 20 talented professionals to the GFI team in 2017. In this report, you’ll learn how your generous support enabled our scientists, innovators and business analysts, policy experts, and corporate engagement team to accelerate good food innovation.

Every member of our team is dedicated to transforming our planet’s broken food system into one that can sustainably and humanely feed a global population that is slated to reach almost 10 billion people by 2050. With your continued support, we will achieve that outcome. I invite you to join us as we look back and celebrate the progress you made possible over the past year.

With heartfelt gratitude and optimism for the future,

Bruce Friedrich
Co-Founder & Executive Director
GFI AGAIN HONORED AS TOP CHARITY

“Based on ACE’s thorough analysis, we are convinced that GFI is one of the three best nonprofits for donors looking to maximize their positive impact for animals. We are impressed by GFI’s leadership, strategy, transparency, and commitment to metrics and accountability. GFI is highly focused on removing animals from industrial agriculture, and ACE is pleased to recommend donating to them.”

Jon Bockman, Executive Director, Animal Charity Evaluators

VISION
A world where the most affordable and delicious products are also good for our bodies and the planet. A world in which the vast majority of meat, eggs, and dairy is plant-based or clean.

MISSION
GFI harnesses the power of food innovation and markets to transform the global food system away from conventional animal products and toward plant-based alternatives and clean meat.

The Good Food Institute is a 501(c)(3) nonprofit organization – Tax ID 81-0840578. We are powered by philanthropy, relying on gifts and grants from our family of supporters to fulfill our mission. Find our financials at www.gfi.org.
**SOLUTION**

Use food innovation and markets to transform agriculture away from the use of animals and toward **plant-based and clean meat alternatives**.

---

**CHALLENGE**

Industrialized animal agriculture is a significant contributor to the world’s most pressing problems:

- **Feeding the World**
  
  Growing crops to feed them to farm animals is vastly inefficient, driving up the price of grains and legumes, and entrenching global poverty.

- **Climate and the Environment**
  
  United Nations scientists state that raising animals for food is “one of the major causes of the world’s most pressing environmental problems, including global warming, land degradation, air and water pollution, and loss of biodiversity.”

- **Keeping Antibiotics Working**
  
  The widespread use of antibiotics in farm animals is leading to the development of antibiotic-resistant superbugs; a report from the UK government calls the threat to the human race from superbugs “more certain” than the threat from climate change.

- **Reducing Needless Suffering**
  
  Industrialized animal agriculture subjects tens of billions of thinking, feeling animals to lives of extreme confinement, emotional trauma, painful mutilations, and inhumane slaughter.

---

**GFI AT-A-GLANCE**

**What is plant-based meat?**

Plant-based meat looks, tastes, and feels like conventional meat from animals but is comprised of plant-based ingredients. These products contain no cholesterol and are much better for the environment.

**What is clean meat?**

Clean meat is produced by taking a small sample of animal cells and replicating them outside of the animal. The resulting product is 100 percent real meat, but without the antibiotics, E. coli, salmonella, or animal waste.
WHAT WE DO

GFI IS ACCELERATING THE SHIFT TOWARD A HEALTHY, HUMANE, AND SUSTAINABLE FOOD SUPPLY.

HOW WE DO IT

Fostering Innovation
We promote scientific and technological research and innovation to accelerate the growth of plant-based and clean meat alternatives.

Influencing Institutions
We work nationally and internationally to influence change at the highest levels of government and academia as well as among nonprofits, thought leaders, and in the media.

Supporting Startups
We provide mission-critical support to entrepreneurs and early-stage startups, contributing solutions at every point along the plant-based or clean meat supply chain.

Engaging Corporations
We transform the food industry from the inside out by helping food processing, restaurant, grocery, and distribution companies improve their plant-based and future clean meat offerings.

9 TEAMS; 1 MISSION

TOGETHER, WE ARE ACCELERATING THE NEXT AGRICULTURAL REVOLUTION!
GFI is funded entirely by gifts and grants from our family of supporters. All the progress highlighted in this report is only possible thanks to friends like you. Thank you!

Ashley Angela Toh
Humanist Society (Singapore)

“GFI’s programs are guided by reason, informed by evidence, and driven by compassion. This is all a perfect fit for our group’s values, and that’s why we are proud to support GFI with a fundraiser we co-organized with Effective Altruism Singapore. We especially love championing scientific solutions to global problems and are confident that GFI is turning our funds into progress toward a healthier, kinder world.”

David Bronner
Cosmic Engagement Officer (CEO)
Dr. Bronner’s Magic Soaps

“Social justice and environmental sustainability have formed the core of Dr. Bronner’s ethos for five generations. We strive to not just preach—but practice. That is why we’re thrilled to support The Good Food Institute’s groundbreaking work to create a healthy, humane, sustainable food system—better for the planet, animals, and our fellow humans. United, we will create a better world for all. ALL-ONE!”

Rachel Atcheson

“Making the greatest possible impact with my giving is extremely important to me, so GFI’s strategic approach and focus on results made the decision to become a monthly giver an easy one! GFI is transforming the food system from the inside out, and I am energized to be part of it. It’s great to know I am sustaining their work throughout the year.”
ACCELERATING THE SCIENCE OF PLANT-BASED AND CLEAN MEAT

GFI’s science and technology team members are global experts in the science and technology of plant-based and clean meat. They are investigating the best scientific opportunities and helping to solve the most critical challenges of these incredibly promising food technologies.

Our SciTech team’s key accomplishments in 2017:

Launching the world’s first university course on plant-based meat, as well as a competition to research new plant-based seafood solutions, both in partnership with the University of California at Berkeley. The courses were so successful that UC Berkeley later launched a permanent “Program for Meat Alternatives” that GFI co-designed and will launch nationwide.

Bringing together every clean meat company in the world (currently four based in the U.S., three in Israel, and one each in Europe and Japan) for quarterly meetings to explore collaborative research opportunities, identify research questions to pitch to academics or established companies, and discuss IP pool or patent pledge opportunities.

Releasing the first-ever open-source white papers outlining the path to commercialization for plant-based meat and clean meat and presenting multiple webinars to investors and key scientific and food media representatives.

Meeting with dozens of venture funds and investors about the commercial viability of clean meat—from Bill and Melinda Gates’ Investment Group to DFJ—to help secure a $17 million investment round into Memphis Meats and seed the ground for future clean meat investments.

Presenting a poster on the applicability of medical cell therapies to food at the “Scale-up and Manufacturing of Cell Based Therapies” conference. GFI’s entry was selected as the second-best poster out of all 74 that were presented, despite being the only non-medical poster.

Presenting at ten conferences and seminars, including keynotes at the 3rd International Conference on Clean Meat and the first ever clean meat conference in Israel, a session on clean meat at the Institute of Food Technologists conference, and two deep-dive technical seminars presented to investors and entrepreneurs at Impact.tech.

“GFI’s scientific consultation and financial support have been outstanding and absolutely invaluable to me. Thanks to GFI, I’m exploring the next steps in large-scale muscle cell production so we can achieve scale-up for clean meat production as swiftly as possible.”

INNOVATION

GROWING THE MARKETS FOR PLANT-BASED AND CLEAN MEAT

GFI’s innovation department is building an ecosystem where plant-based and clean meat companies thrive. We create new good food companies from scratch and help existing startups become more successful, thereby generating direct competition with conventional animal products.

Our innovation team’s key accomplishments in 2017:

Providing technical and strategic support to more than 100 plant-based and clean meat startups ranging from entrepreneurs in the process of selecting a business idea to teams with existing products who seek to expand their reach.

Examples include:
- Providing fundraising strategy, reviewing pitch decks, and making connections with potential investors.
- Lending communications expertise, including conducting a pilot survey for naming a clean meat company, helping a plant-based meat company with digital marketing strategy, and helping multiple plant-based meat companies design their packaging for maximum consumer acceptance.
- Assisting more than a dozen entrepreneurial teams with product development advice related to production scale up and formulations for extending shelf life.
- Helping multiple startups navigate regulatory topics such as K-12 foodservice and clean meat regulations abroad.

Compiling mission-critical resources from a global map of incubators and accelerators to databases of ingredient suppliers, distributors, food scientists and other industry players.

“Launching a startup is exhilarating and intense. Alpine Roads wouldn’t exist but for GFI’s scientific guidance and willingness to speak with investors about our ambitious approach. I’m thrilled by how far we’ve progressed over the last year thanks to GFI’s strategic and technical support.”

Magi Richani | Co-founder and CEO | Alpine Roads

Juan Friedrich at TEDx Sonoma, “Market Forces and Food Technology will Save the World.”

B ringing plant-based and clean meat topics to more than a dozen prominent tech-focused conferences including the influential Future Food Tech annual conferences in London, San Francisco, and New York City; SxSW; the Concordia Summit; the annual “Capitalism Conference” (CapCon); and food innovation conferences at Stanford and Harvard.

Bruce Friedrich is Innovating the Future of Food
Rich Roll Podcast Episode 286

Bruce Friedrich
executive director of The Good Food Institute ... explains, ‘What [these plant-based meat companies] did was say, ‘Look, meat is made up of lipids and amino acids and minerals and water. There is nothing in meat that we cannot make from plants.’”

Growing our GFIdeas community to more than 350 plant-based and clean meat entrepreneurs who gather via video conference monthly and trade ideas on a GFI-generated Slack channel. Multiple new companies have been launched by GFIdeas attendees, including a plant-based meat brokerage that is focused on K-12 schools, a U.S. clean meat company, and Dao Foods International, a company formed to bring plant-based and clean meat to China.

Connecting with the next generation of leading entrepreneurs through speaking events at top business and management schools around the country including Harvard, Yale, MIT, Stanford, and the University of Pennsylvania.
FACILITATING FOOD COMPANY TRANSFORMATION

GFI’s corporate engagement department increases the quality and quantity of plant-based meats that are available in the marketplace and encourages major corporations to invest R&D and M&A resources in plant-based and clean meat.

Our corporate engagement team’s key accomplishments in 2017:

Establishing cooperative relationships with 32 of the top plant-based meat, dairy, and egg companies in the United States, to help them leverage the latest market intelligence, tailor their advertising for maximum sales, move into new export markets, and remove all animal ingredients from their products.

Advising four of the largest meat companies in the world on opportunities in plant-based and clean meat. For example, we presented an in-depth overview of the plant-based and clean meat sectors from business, marketing, and technical perspectives to 80 people attending a top U.S. meat company R&D symposium. The principal organizer of the event declared that “it was the best session we’ve ever had.”

Advising seven food industry giants and creating collaborations that will divert money away from conventional meat, dairy, and egg production and toward plant-based and clean alternatives. GFI has been sought out by these companies to provide expertise on good food innovations and to help evaluate M&A and VC investment opportunities.

Compiling rankings of the top 100 U.S. restaurants’ menus for plant-based options, and creating a dedicated website to showcase the results: goodfoodscorecard.org. So far, we have directly engaged with 12 of the top 100 restaurant chains—four of which are in the top 10—to increase plant-based offerings and improve the marketing of these options. We are working closely with one leading restaurant chain to demonstrate regional demand for plant-based meat and connect the company with plant-based manufacturers for product sampling.

“I believe that in 30 years or so we will no longer need to kill any animals and that all meat will either be clean or plant-based, taste the same and also be much healthier for everyone.”

Richard Branson
LEVELING THE PLAYING FIELD FOR GOOD FOOD

GFI’s policy department is focused on creating a clear pathway to market for clean meat and a level playing field for plant-based meat, eggs, and dairy. GFI’s policy team works with government agencies and elected officials to achieve maximum success in a market dominated by powerful animal agriculture industries.

Our policy team’s key accomplishments in 2017:

- Partnering with plant-based pioneer Beyond Meat to co-host our inaugural reception on Capitol Hill. Three members of the United States Congress addressed the packed room, along with Beyond Meat founder Ethan Brown and GFI co-founder and executive director Bruce Friedrich.
- Hiring the world’s first full-time lobbyist for the plant-based and clean meat industries.
- Securing language in the U.S. Senate Agriculture Appropriations report urging USDA to invest a portion of its $3 billion in research funding toward the investigation of plant proteins.
- Filing an official Petition for Rulemaking under the U.S. Administrative Procedure Act and Food Drug and Cosmetics Act to protect plant-based food companies from labeling censorship that would put them at a disadvantage against animal-based industries.
- Putting good food on the agenda at prominent conferences and meetings including The Food and Drug Law Institute’s Food Advertising, Labeling, and Litigation Conference; The Dupont Summit on Science, Technology, and Environmental Policy; and an invitation-only USDA listening session focused on the 2020 Dietary Guidelines for Americans.

POLICY

WALL STREET JOURNAL
Do You Need a Cow for Milk? Debate Churns Over Dairy Definition
By Jacob Bunge

“The Washington-based Good Food Institute, which lobbies on behalf of plant-based dairy and meat products, on Thursday filed a petition asking the FDA to affirm soybean and nut processors’ right to call their products milk. ‘This [legislation] would be the government censoring plant-based milk and cheese companies in violation of the First Amendment,’ said Bruce Friedrich, the institute’s executive director. ‘It would treat consumers like infants, suggesting that Americans can’t figure out what soy milk is.’”

Tweeted to the paper’s 13.2 million followers

MARKETPLACE
The fight for the dairy aisle turns on the question: ‘What’s milk?’
By Adam Allington

“‘My GFI internship projects included analyzing bills, drafting legal memos, and researching for and editing drafts of an amicus brief for a case before the Ninth Circuit Court of Appeals. Each project was substantive and provided me with real-world experience and insight into how policy impacts good food commercialization. Working with GFI exceeded all of my expectations and solidified my decision to continue to be involved in the food law realm.’

Nicole Manu | Class of 2018 | George Mason University School of Law

POLICY MEDIA

Reaching a settlement in our Freedom of Information Act (FOIA) lawsuit against the Food and Drug Administration (FDA). FDA provided nearly 1,000 pages of responsive documents and paid all of our legal fees.

Completing fact-finding reviews on the regulatory landscape for clean meat in the United States, Australia, New Zealand, Brazil, China, and India.

GOOD FOOD GOES GLOBAL

GFI’s international engagement department works as a force multiplier, bringing the expertise of GFI to the rest of the world. Formally launched in the Fall of 2017, our international engagement team is exploring how best to tailor and implement GFI’s initiatives for maximum transformation of conventional animal agriculture globally.

Our international engagement team’s key accomplishments in 2017:

- Mapping the landscape of meat production and consumption in Brazil, India, China, Japan, Singapore, Indonesia, Malaysia, Thailand, South Korea, Monaco, Belgium, the Czech Republic, France, Germany, Ireland, Italy, the Netherlands, Norway, Spain, Sweden, Switzerland, and the United Kingdom to determine how best to propel R&D and product development in the plant-based meat space.

- Connecting with government agencies in Singapore, Brazil, India, Israel, the Czech Republic, United Arab Emirates, and France to explore the potential for establishing and funding plant-based or clean meat research centers in these countries.

- Meeting with C-Suite executives at major European and Brazilian meat and egg companies to discuss the multi-billion dollar market opportunity that is plant-based and clean meat. These companies are now diversifying to offer plant-based products to their customers and are funding new plant-based foods R&D programs.

- Meeting with the Central Food Technologies Research Institute (CFTRI), an Indian government research and teaching institute under the Department of Science and Technology; establishing a working group that includes CFTRI, GFI, and Humane Society International to publish a white paper on the opportunities for plant-based and clean meat products in India.

- Initiating contact with entrepreneurs in India, Mexico, Brazil, and China to help them launch plant-based meat companies.

GFI HAS SUPPORTERS ON SIX CONTINENTS, FROM SWEDEN TO SINGAPORE AND FROM CANADA TO CHILE!
We’re transforming our planet’s broken food system by harnessing the power of food innovation and markets to create a future of food that is healthy, humane, and sustainable.

But we can’t do this alone.

You can make your mark as a climate protector, animal advocate, and a pioneer in the next agricultural revolution by making a gift to GFI.

THE DAWN OF THE NEXT AGRICULTURAL REVOLUTION IS HERE.
